

Ultrasonic sensor

UC3500-30GM70-2E2R2-V15

- 2 switch outputs
- Synchronization options
- Temperature compensation
- Can be parameterized via the ULTRA-PROG-IR software and interface (accessories)

Ultrasonic direct detection sensor

Dimensions

Technical Data

General specifications

Sensing range	200 ... 3500 mm
Adjustment range	300 ... 3500 mm
Dead band	0 ... 200 mm
Standard target plate	100 mm x 100 mm
Transducer frequency	approx. 120 kHz
Response delay	≤ 150 ms

Nominal ratings

Temperature drift	≤ ± 1.5 % of full-scale value
Time delay before availability	t_v ≤ 175 ms

Technical Data

Limit data			
Permissible cable length			max. 300 m
Indicators/operating means			
LED yellow			solid Switching state switch output 1
LED green/yellow			yellow: switching state switch output 2 green: Teach-In
Potentiometer			Switching output 1 and Switching output 2 adjustable
Electrical specifications			
Rated operating voltage	U _e		24 V DC
Operating voltage	U _B		12 ... 30 V DC (including ripple)
Ripple			≤ 10 %
No-load supply current	I ₀		≤ 50 mA
Interface			
Interface type			Infrared
Mode			point-to-point connection
Input/Output			
Input/output type			1 synchronization connection, bidirectional (Factory setting: synchronized mode) / Teach-In input
0 Level			≤ 3 V
1 Level			≥ 15 V
Input impedance			typ. 900 Ω
Number of sensors			max. 10
Switching output			
Output type			2 switch outputs PNP, NO (NC contact programmable)
Default setting			300 ... 3500 mm (adjustable via potentiometer)
Repeat accuracy	R		± 5 mm
Operating current	I _L		Per 150 mA , short-circuit/overload protected
Switching frequency			≤ 2 Hz
Switching hysteresis			35 mm (programmable)
Voltage drop			≤ 3 V
Off-state current			≤ 10 μA
Compliance with standards and directives			
Standard conformity			
Standards			EN 60947-5-2:2007+A1:2012 IEC 60947-5-2:2007 + A1:2012
Approvals and certificates			
UL approval			cULus Listed, General Purpose
CSA approval			cCSAus Listed, General Purpose
CCC approval			CCC approval / marking not required for products rated ≤36 V
Ambient conditions			
Ambient temperature			-25 ... 70 °C (-13 ... 158 °F)
Storage temperature			-40 ... 85 °C (-40 ... 185 °F)
Shock resistance			30 g , 11 ms period
Vibration resistance			10 ... 55 Hz , Amplitude ± 1 mm
Mechanical specifications			
Connection type			Connector M12 x 1 , 5-pin
Degree of protection			IP65
Material			
Housing			brass, nickel-plated
Transducer			epoxy resin/hollow glass sphere mixture; polyurethane foam
Installation position			any position
Mass			140 g
Construction type			Cylindrical

Release date: 2020-08-05 Date of issue: 2021-02-05 Filename: 238377_eng.pdf

Connection

Connection Assignment

Wire colors in accordance with EN 60947-5-2

1	BN	(brown)
2	WH	(white)
3	BU	(blue)
4	BK	(black)
5	GY	(gray)

Characteristic Curve

Characteristic response curve

Curve 1: flat surface 100 mm x 100 mm

Curve 2: round bar, Ø 25 mm

Switching outputs operating mode

Switching output mode

Accessories

	BF 30	Mounting flange, 30 mm
	BF 5-30	Universal mounting bracket for cylindrical sensors with a diameter of 5 ... 30 mm
	V15-G-2M-PUR	Female cordset single-ended M12 straight A-coded, 5-pin, PUR cable grey
	ULTRA-PROG-IR	Configuration software for ultrasonic sensors
	UC-PROG-IR-USB	Interface cable for parameterization of sensors with IrDA interface

Indication

Displays and Controls

The sensor has two potentiometers and two display LEDs.

LED 1 (yellow)	On/off: Switching state of switching output 1 Flashing: Error when setting the switching points (switching point 2 < switching point 1). This state only occurs in window function operating mode (2 switching points).	
LED 2 (yellow)	On/off: Switching state of switching output 2 Flashing: Error when setting the switching points (switching point 2 < switching point 1). This state only occurs in window function operating mode (2 switching points).	
LED 2 (green)	approx. 500 ms on: Range limit taught in Off: Normal mode	
Potentiometer 1	Setting a switching point (Default setting: Setting the switching point of switching output 1)	
Potentiometer 2	Setting a switching point (Default setting: Setting the switching point of switching output 2)	

Function

Setting the Sensor Using the Potentiometers

The sensor is equipped with two potentiometers. These potentiometers are assigned to the two switching outputs by default. The switching outputs operate in switching point mode by default. Potentiometer P1 is used to set the switching point on switching output 1. Potentiometer P2 is used to set the switching point on switching output 2.

Note:

The function of the potentiometer can be altered using the ULTRA-PROG-IR software. As soon as a configuration has been changed, the potentiometer function selected using ULTRA-PROG-IR is activated.

Parameterization

Parameterization via ULTRA-PROG-IR

In order to be able to set the sensor parameters and adjust the sensor to the respective application, the sensor is able to communicate with a PC via the integrated infrared interface. The UC-18/30GM-IR interface cable is required to allow communication via this method. This cable is connected to an unused USB port on the PC.

The ULTRA-PROG-IR parameterization software is also required for setting the sensor parameters. The ULTRA-PROG-IR software can be downloaded for free from the www.pepperl-fuchs.com website. The software allows all open parameters to be set, including:

- All trip points and switching hystereses
- Output modes and behaviors
- Delay times
- Settings and setting ranges of the potentiometer
- Settings for teach-in and synchronization
- Definition of blind zones
- Sensor modes and measurement methods
- Filtering measurement values

The following service functions are also available:

- Observing and recording measurement values
- Diagnosing interference reflections

Teach-in

The sensor is equipped with a function input (XI). In order to teach in a limit value, this sensor must be parameterized as the Teach-in input using the ULTRA-PROG-IR parameterization software. This parameterization software allows you to specify what limit value is taught in.

Note:

The Teach-in function is not activated when the sensor is delivered.

Description of the Teach-in process:

 **PEPPERL+FUCHS**

1. Position an object at the required distance.
2. Connect the Teach-in input to L-.
The green LED lights up briefly after approx. 3 seconds. This indicates that the required distance has been successfully saved.
3. Disconnect the Teach-in input from L-.

Note:

If the Teach-in input remains connected to L-, the Teach-in process is repeated every 3 seconds.

Commissioning

Synchronization

The sensor features a function input (XI). Using the ULTRA-PROG-IR parameterization software, this function input can be configured as a synchronization input to suppress mutual interference from external ultrasonic signals. This is illustrated in the following description.

If the synchronization input is not connected, the sensor operates with internally generated cycle pulses.

External synchronization

The sensor can be synchronized by applying external rectangular pulses. The pulse duration must be $\geq 100 \mu\text{s}$. Each rising pulse edge sends an individual ultrasonic pulse. If the signal at the synchronization input is high, the sensor reverts to the normal, unsynchronized operating mode.

If a low signal is applied to the synchronization input, the sensor switches to standby. In this operating mode, the last recorded output statuses are retained.

Internal synchronization

Common mode operation

Up to ten sensors can be synchronized with each other. To do this, the synchronization inputs of the individual sensors are connected to each other. When configured in this state, all of the sensors send the ultrasonic signals together at the same time. The cycle rate corresponds to the cycle rate of the sensor with the lowest rate.

Multiplex mode

Up to ten sensors can work in multiplex mode; i.e. the sensors send their ultrasonic signals in succession. This prevents the sensor signals interfering with each other. In multiplex mode, the synchronization inputs of all sensors are connected to each other. An address must also be assigned to each sensor using the ULTRA-PROG-IR parameterization software, and the number of sensors to be synchronized must be determined. To start multiplex mode, all sensors are commissioned together by switching on the power supply.
